

Scientific Explanation of Existence.

We all have asked ourselves being children or kids: Where is the Earth? In the Solar System. Where is the Solar System? In the Milky Way galaxy. Where is the Milky Way? In the Universe. Where is the Universe? In my generation we stopped here. Recently we know that there are multiple Universes. So, the question is where is the Existence? This question has no solution. It simply cannot be answered. To any answer that was given, like a Hyperspace, we would ask the same question, since Hyperspace would be included in Existence. As for a creative God, the same would happen, we include the God in Existence and ask again. Nothing, there is no answer.

Now well. It is taken away very hardness to this question and carry it with the intense immensity of being alive if we know that Mathematics is Existence. Mathematics is nothing, so it doesn't have to be anywhere.

Of course, today we know about galaxies, etc. However, this does not change anything. At any moment in the development of humanity, even before, in the time of hominids, there was the same question, where is Existence? Whatever it is and encompasses what encompasses Existence. When anybody is expected to Science solve this problem, tremendous stupidity is being committed, and yet Science has much to say about it. Not the answer, but the focus of the matter.

Science, nobody wants to know this, is the mathematical study of Reality. And the fact that the scientific method is so successful, so accurate and applicable to everything, already puts us on track. We also know that mathematics likes few and, to top it off, those who like them consider them an economic issue, to get a dominant position. They learn the procedures, but they don't understand. Even astrophysicists, who get fed up with math, know that Existence is

mathematical, come on, they don't know it, but they handle it, and they can't think to turn the phrase around and say Mathematics is Existence. The human world is upside down. And the human being is willing to reach the suicide of the planet rather than trying to go around their world to fit the Reality.

This occurs because the mathematical equations are not disputable. Although you can comment on them, it is only in terms of their beauty or applicability to the phenomenon under study, but not in terms of their certainty, because once proven that they are correct, without error, there is nothing more to talk about. This destroys the warlike competitiveness of the human being.

The issue is not when Science has answered the question at hand, remember, where is the Existence?, because such a question cannot be answered, but when it has taken the right approach. For this we have to know that what it is about is to demonstrate emphatically that the Infinity doesn't exist. Of course, there really is no doubt in this either. I knew it true at 3 or 4 years old, when I barely knew how to count. And I also knew for certain that all my friends knew it for real, but they played to doubt it. I mean, of course, that we are not and cannot be immortal. We all know very well since early childhood.

How funny. The 0 was not included in the mathematical knowledge until the third century after Christ. This in the Old World. In the Toltec culture, in Meso America, it was included millennia before. The latter demonstrates two things, 1°.- that could be included and there were reasons for this, 2°.- that the Toltec Culture was very unique. But, to what we are going. If we multiply any number by 0, the result is 0. Then, if we divide any number by 0... There is no result. We can never find a number large enough that multiplied by 0 is different from 0.

On the other hand, if we check what they told us being children in school: That the Infinite is where two parallel straight lines are cut,

matching the equations of both, we get a mathematical incongruity, which means that the premise is false: There is no value of x for which $y_1 = y_2$ Two parallel straight lines are never cut.

It is done. The Infinite is a mathematical concept, but it is not a mathematical possibility. When 0 appears in the denominator of an equation, it is over, unless it can be operated at the limit. The Infinite is a delight of mathematicians and a nightmare of astrophysicists. This is the reason that nobody wanted to consider 0 for millennia. Because it shows that immortality is not possible. So we have been at least 17 centuries of betrayal of Science: It is proven, but no scientist has genitals to say so.

Here we must make a clarification. And it is that someone might think that although Existence cannot be Infinite, Nothing could be, since Nothing would be outside of Existence and would not have to be mathematical. However, if Nothing were Infinite, it would have a characteristic, then it would no longer be Nothing and it would have to be included in Existence. In that case it would be mathematical and it could not be Infinite.

Alright. In those days, Science had barely started. No one could be sure that it worked without exception. It was Galileo, in the 17th century, who settled the scientific method. And they almost burn him alive for his boldness. Go we later then.

Marcos Favela in 1824 enunciated the Second Principle of Thermodynamics. This principle demonstrates that the complete Existence, in its Totality, is messing up, which implies that the Existence is not stable and will have an end, when it can no longer be disordered. Then, now more flatly, it is shown that immortality, the Infinite, is not possible. Note that heat is transmitted from hot to cold, and never the other way around. This marks the arrow of Time, Existence grows cold, that is, it becomes disordered.

At this time, mathematics was already being developed and applied. However, Science continued to betray humanity. And even today the Second Principle of Thermodynamics is taught in institutes and engineering as a useful matter to design and manufacture engines, without revealing, in fact deliberately hiding, its scope.

Edwin Powell Hubble, an American astronomer, is well known precisely for demonstrating, in 1929, that the Universe is not stable. Is it possible?! If it had been demonstrated a century earlier!

The development of Science is plagued by 3 types of phenomena:

- 1°.- Rejection of the same investigator for his or her own discovery.
- 2°.- Wrong or insufficient interpretation of the results.
- 3°.- Sassy concealment of meaning to the general population and students of Science.

I studied aeronautical engineering. I did not finish the project because I was not looking for a title, but the understanding of Existence. After so many years of studying Physics, I had to discover myself that such matter had a clear and defined objective: Find the Equation of Everything. Not only did they hide this for me, they hid all of the above exposed here, and they messed me up badly so that I couldn't find out. For example, in middle school 6 or 7 months were spent explaining the mathematical limits, when the thing is explained in 30 minutes. And with some tremendous and very badly intentioned white lies.

However, the truth sneaks at times. In the pre-university course, the math teacher, who in the middle of the course changed jobs, after having said goodbye, stood a moment at a separate table to place his papers and, carelessly, revealed the secret of Infinity. He said, pointing to the blackboard full of differential equations, that that could not be done in principle, that the Infinite is not mathematically operative, "the Infinite is a delight of mathematicians and a nightmare of astrophysicists." He smiled sympathetic and sad, and

left. There was a contemptuous murmur in the class, like "what does this man say?" The bell rang for me.

In the second engineering course, waiting for the Thermodynamics class, a guy slipped. He said: look. He wrote on the board the definition of entropy, it is done in differential equation, he placed it a little, without taking anything from outside, put a circle in the sign of integral, saying: "Circular integral, to the Totality, this is greater than 0 The entropy of Totality increases with Time". And he left. There was also a murmur here in the class: "Who is this guy, what did he say?" The bell rang for me once again, very loudly.

This ghost had revealed to us the Second Principle of Thermodynamics in its clear and concise expression, what they had and would continue to hide in all our studies. When I was finally able to investigate on my own ... I suspected from before this that entropy was disorder, but when I tried to check it on the Internet, a few years later, I only found absurd and complex explanations that it was not. It had to be Stephen Hawking in his magnificent book "History of Time" who finally said it without bluntness or deception. Today, this clear and simple version of the Second Principle of Thermodynamics is on the Internet, speaking of disorder in explaining entropy, but still linking the matter, as if it could be $= 0$, in reversible processes, something that does not exist, without clarify that it is an idealization to solve engineering problems approximately.

I have recently discovered that this demonstration that the disorder of Existence increases with time, the one made by the ghost, and that it appears very similar in official notes from prestigious universities, is not correct. First, the circle in the integral sign does not mean "to the Totality", but to a complete cycle in cyclical processes, which are not the case. Then, the correct way to demonstrate it is by calculating the variation of entropy or disorder in a system and its environment in any process. This always adds positive, and it is the case of the

complete Existence: Every process positively increases the entropy or disorder of the Totality.

When Newton formulated his mechanics at the end of the 17th century, they began to suspect that the Equation of Everything could be found, that is, an equation that explained, in the first instance, any existing phenomenon. This idea gained strength when Einstein published the General Theory of Relativity in 1915. In successive decades, in the development of Quantum Mechanics, 3 of the 4 natural forces were quantumly formulated: Electromagnetic, Strong Nuclear and Weak Nuclear, pending, according to Stephen Hawking, in his book "History of Time", published in 1988, quantumly formulate the 4th force: Gravity.

To say here that Stephen Hawking has been the most nice scientist of all time. In his video "Who created the Universe?" He exposes and concludes that the Big-bang happened without any previous reason or cause, which, more precisely saying is "There is no reason for Existence", and constitutes The Truth. And he ends by saying that this life is the only opportunity we have to experience existence, which means affirming that we are mortal, without the possibility of immortality.

However, the Higgs Boson was formulated in 1964, 24 years before Hawking wrote his book. And the Higgs Boson is the quantum explanation of Gravity. It was empirically demonstrated at CERN, the modern particle accelerator in Switzerland, in 2012. So the Equation of Everything has been formulated since 1964, demonstrated since 2012, and no scientist, including Stephen Hawking, has felt like recognize such tremendous success of Science.

Why? Because in this world nobody wants to know. There are many seekers, but the finders shine by their absence. Nobody wants to find, only to turn things around and speculatively. No one wants to

get out of the confusion because in the confusion one can believe that one believes in immortality. And get out of the confusion discover the dirty human maneuver.

Thus, when the Higgs Boson comes to solve the problem that the elementary particles have no mass, and it is the interaction with the Higgs Boson that confers it, deforming the Higgs field in it... Damn, this is the gravitational field, the deformation of the space that mass produces... Well, the stupid scientists don't realize it, they get confused, and they continue looking for the quantum explanation of Gravity, what they already have, to find the Equation of Everything because, Although this works, they believe that it has not solved their problem. They are scoundrels.

The result is that since 1964 and increasingly brazenly, more and more absurd theories about the nature of Existence are being raised, violating the Second Principle of Thermodynamics and other fundamental principles, and getting into the Infinite. Bar free of beliefs destroying Science. See the shameful designation of the Higgs Boson as "the particle of God." How silly! What a cowardly betrayal! Scientists also return to the flock for total suicide.

Here is a basic problem. The scientists expected the Equation of Everything to answer the Critical Question: Where is the Existence? As this question cannot be answered, and a scientist cannot admit that there is something unanswered... They knew it as children, but they entered the "body" of scientists and ceased to be themselves to be agents of an institution... They cannot realize what is happening. They can't solve the puzzle that all the pieces have already, and it's very simple. This is not exculpatory. This constitutes the betrayal to Science, because Science always had the goal of getting us out of every "body."

As I never acquired a "body", but rejected all that was presented to me, including that of an engineer, I researched everything, learning to

distinguish what is true and what is not, a long and difficult task. It is clear that nobody is never safe from error and accident. The case is that I investigated the Report of Carlos Castaneda, something that any scientist discards from the outset. It is the witchcraft that began to develop, before becoming independent, in the Toltec culture already mentioned, which incorporated the 0 in its mathematics millennia ago. At first I didn't know if it was true, but I was hooked by its extraordinary beauty. Now I know that everything incredible there is narrated is endorsed by Quantum Mechanics. There is some error of interpretation of their "visions", but their knowledge, in general, is rigorously true.

Warlocks experience physical laws as "visions," and call them the "Eagle Commands." For example, the Second Principle of Thermodynamics is called the "Rolling Force," and they "see" it as rings of fire that roll everywhere, hitting organisms. It gives them life in principle, and death later. There is no doubt that here his interpretation is correct. The "visions" are always correct, of course, that is why they are "visions", if not they would be other thing.

Well, the fact is that these wizards of extraordinary power, incomparable with any other, speak of "what cannot be known." Wow, they present this as uninvestigable, as a destroyer or defacer, enthusiasm, and they advise to set it aside. No, hell. Quite the opposite. What can not be known is the question of all children, where is the Existence?, and is the source of art, creativity, search, enthusiasm, the intensity of that strong and deep feeling that is the immensity of being alive. Without this feeling life is bullshit, which is what is experienced now. The human being is dead in life because he or she ignores on purpose, he or she has erased almost completely with his or her misery this exquisite feeling originated in what cannot be known, and that inspires enthusiasm for life. Without this, it would be better for us to be dead, and by denying it we turn to collective suicide, the crime of killing the planet we are practicing and we will consummate if we do not accept what cannot be known.

Let's solve then:

In the Big-bang there is a cursed Infinity, but it is not the one that has been tried to avoid by all means. Best known example: String Theory.

We have that if all the particles are in a single infinitely small point, the distance between them is 0. This 0 would be in the denominator... Catapún, to the Infinite. If the particles were strings, they would have a length. The denominator would not be 0. Pure cunning. This was rejected for long years, but recently, by dodging the final success of Science, many scientists have started to develop this absurd.

We'll see. The Higgs Boson solves the problem that no elementary particle has mass, and the interaction of the particles with it confers this effect, the gravitational one. So, the elementary particles are not strings or balls, but only mathematical information.

Let us realize that if the particles were strings or balls of something, we would have to divide that something into atoms, these into new particles, and start again... Catapún, to the Infinite. No, no. we have to find simple solutions that solve. If the solutions we provide take us to the beginning again, we stamped against the Infinite, and we know for certain that the Infinite does not exist. Ask a child who has not yet been taught anything.

If the elementary particles have no mass, they are only mathematical information. And like all Existence it is only elementary particles... To say here that Dark Matter is the gravitational influence in this of the others Universes. And in those Universes there will be something similar to elementary particles that interact quantitatively with those of the our, with the Higgs Boson, directly or indirectly. What is clear is that the different Universes are not completely isolated from each other. While the Dark Energy

seems to be due to the pressure exerted by the particles in their behavior as waves... And since all Existence is only elementary particles, as I say, Existence is only mathematics. We turn it over: Mathematics is Existence.

So, the fact that the particles are together at a very small point does not lead to Infinity, because it makes no sense to talk about distance between them, at least at this time. They are nothing, damn. However, there is Infinity, in principle, in that the bursting point is infinitely small, and in that the order is infinite there.

Know the reader that I am solving this by writing it. Yes, I have thought about it a lot and have written several approaches. I have analyzed a lot of information, and I have always known what has to be, we have always known it, but the last organization is emerging now.

Keep in mind that differential calculus solves problems with the Infinite: Derivatives and integrals. But this is because there is a solution to the problem. Derivatives are calculated at the limit and, however, the calculation is not approximate, but accurate and precise. Integrals, on the other hand, cannot be calculated directly. There is a solution, but there is no calculation procedure, there is no mathematical path, and they are solved by artistic divination, since the derivative of the solution is the function that we have to integrate (See Fundamental Theorem of the Integral).

But go. The Infinite in the Big-bang has no solution. That does not exist. Now, although we cannot know what was before the Big-bang, because there is nothing before the Big-bang, we can give an explanation to the matter. How silly, this explanation is artistic divination, but it is still mathematical.

We are already clear that Mathematics is Existence, since elementary particles are not something that carries mathematical

information, but only mathematical information, and there are only elementary particles. Now, mathematics is nothing. That is, we must not give much importance to Existence. After all, Existence remains nothing. On the other hand, and given the above, Existence must have started without reason, because nothing can not arise for nothing from Nothing.

Nothing burst in the Big-bang because it is not mathematical. This does not imply that Nothing has or does not have any characteristics. This can only be thought from Existence, never from Non-Existence. Such a thing means that Nothing does not have to explode. The reason for the outbreak is within Existence and not outside, and it is not really a reason. Simply, here we are, that's all. Existence makes sense because Mathematics makes sense, not because of something external to it.

Now, if Mathematics makes sense on its own, it is logical to think that Mathematics is fully developing. Why would they stay in a part of the possibilities?

1°.- The Big-bang exploded in the limit of the Infinite of the order, very hot, the strongest that could explode, but not in the Infinite. And will last the limit of the Infinity of Time, as long as it can last, but not Infinity, but when it can no longer be messed up.

2°.- From the Big-bang all the mathematical possibilities are being developed, which are the different Universes. If a mathematical equation is correct, it has existed, exists or will exist in the development of some Universe if the circumstances arise.

Nature of Existence:

First let's make some general notes:

- There is no reason for Existence. Existence has no purpose or objective. There will be no final result of Existence.
- It is not that there are mathematical laws in Existence, but that mathematical laws are Existence. (So it makes no sense to violate

these laws because we are these laws. Human laws violate mathematical laws. And for the record that human laws try to protect mathematical laws, know that human legislation arose to protect criminals and alleged criminals, and not the other way around, just feel the exquisite beauty of the Universal Declaration of Human Rights, but they do not quite succeed. Eliminate human laws and leave only complete respect for Existence).

- There are no impassable borders in Existence, not even outside, because it not exist outside of Existence.

- Existence has no form, it is not a sphere or anything else, but each point of Existence is indistinct from others, and in it the Big-bang occurred (seen from Existence).

- The sum of All Existence equals 0 at all times. Existence is nothing vibrating mathematically. (Now, do not think that if Existence is Nothingness, you can exist outside of Existence, in Nothingness, because outside of Existence, if Nothingness does not vibrate, there is no disorder. Disorder is Existence, and disorder is time. Without disorder there is no time nor consciousness).

- Elementary particles are only particles when observed. As long as they are not observed, they are waves whose amplitude at each point of Existence determines the probability that they are at that point. Therefore, a particle is really in the whole Existence, and it is the perception that determines in which Universe it is, and in which point of that Universe (Quantum Mechanics). Witchcraft travel throughout Existence managing their perception. And sentient beings from other Universes and other points of this visit us managing their perception, not in spacecraft. These are the voices we hear the wizard and the mads.

- Time, and also Space, because they are not different, is disordenation. The phenomenon of existing is disordenation, nothing more.

Origin, development and end of Existence:

Existence can be compared to the vibrating string of a guitar, only without string. The string begins to vibrate with maximum energy

and is attenuated over time. Existence does not vary its energy, since the sum of this is always 0, what is attenuated is the order. Start maximum and end in Nothingness, which never ceased to be. (Remember that there can be no consciousness without disorder. Consciousness is an emergent phenomenon, and it emerges in disorder).

Law of Consciousness Generation:

Existence is chaotic disordenation. In this chaotic disordenation there are intermediate states of order that have meaning, and deserve to be called organization. This happens by chance, and these organized elements are in turn disordered. The organization is Consciousness, without any added element, and is transitory. For example, the atomic nucleus is organization, and is aware of itself, although to a very small extent. Existence is Conscious and tends to increase its awareness spontaneously, by chance. This is the Sense of Existence: The increase of consciousness. The sentient beings, from an elementary particle to a human being, or more, we are, each one of the individuals, the Existence in its Totality.

The casual tendency of Existence to organize is the generic Spirit. And the casually accumulated organization of each organism is the spirit of that organism.

Life and death:

When the organization accumulates, it can be called Life. To say here that Classifications are relevant in Existence, and categories can be clearly defined. However, the dividing lines between the categories of a classification are often diffuse. This occurs especially in the distinction of what is life and what is not. Now, since this is a study of human beings for human beings, we are going to ignore such discussion, and we will speak what is life clearly.

The organization is order, a special type, but only order, and the order is disordered, this cannot be avoided. Then, a living being has to feed to maintain or increase its organization. Feeding means disordering external elements to a greater extent than the order that

replenishes or increases the living being. In this way the Second Principle of Thermodynamics is not violated, since the total result of the operation is disorder. How long can this be prolonged? Maybe a lot, but Infinity sure not. Every living being, sooner or later, will die, that is, it will be hopelessly messy. Then we see this apart.

Directly little organization can occur, but if the living being, before dying, reproduces, failures occur in the reproductions. The vast majority of these failures are fatal, but a few give rise to more organized living beings, with greater success in feeding and not feeding on them. Knowing that every living being is food for someone else. Here we have the evolution of Life, which gives rise to the accumulation of the organization, which is a great and rapid increase in Consciousness, the Sense of Existence.

See that Death is not an enemy of Life at all, but an essential and fundamental part of its development. Without Death there would hardly be Consciousness in Existence. The life of complex and intelligent elements is possible only by Death. Death is our friend, and to it we owe Life. It is Death that gives us Life. Life is not forever. Enjoy it while you live, and do not fight, do not rebel against Death looking for it. Do not give up Life in Tantrum because it is not eternal, moron.

The Death of Existence:

It is already very clear that Existence will die at the limit of the Infinite of Time, when there is nothing left of order that can get messy. In our Universe, almost all the hydrogen will have merged into helium, and the common stars will go out, leaving very little light, about 100 billion years, that is 10^{13} years after the Big-bang. This will have been the Stelifer Era, a moment in the total duration of Existence. Then there will be a much longer stage until white dwarfs, neutron stars and other elements of slower disorder get messy. It will be the Degenerate Era, which will end after 10^{73} years since the Big-bang. By then they will have disintegrated as half of the complex particles, such as protons, with relatively short half-life periods. From here there will be a Universe with hardly any light, in

which there will only be black holes as complex elements, and low energy radiation. It will be the Black Holes Era. Black holes will also get messy, naturally. They do not escape mathematical laws, as it have been said, nor they are completely isolated, of course. They will have been disorderly to a large extent during the Degenerate Era, but they will still be ahead until the whopping 10^{27} years disappear, making a total time since the Big-bang of 10^{100} years, something very difficult to conceive. But the thing does not end here. Then there is an impossible time to calculate, because we go to the limit of infinity, until the disintegration of all elementary particles. See that the half-life (what it takes a sample to cut in half) of the proton is estimated at 10^{31} years, and with this the time it takes for all protons to disintegrate is already at the limit of Infinity. But these do not disintegrate completely, but in simpler particles, with periods of half-life much longer sometimes. The disintegration of all elementary particles, including photons and, of course, the Higgs Boson and its results, goes to the limit of the Infinity of Time, impossible to calculate, when the order will have disappeared completely. But it is not Infinite! This will happen!

By then there will be no order that can be disordered, and there will be no Time, since Time is the disordenation. Will space remain then? No, either, because Space and Time are not different, according to Einstein's equations. This sounds very strange, but remember that there is only mathematical information, and it is nowhere. If there is no mathematical information there is nothing, not even Space. Do not imagine the Big-bang as a little dot in black and empty space, nor imagine the Non-Existence in the same way without a dot. Nothing you imagine is Nothing, even if it is black and empty, because that is something. Ask a blind man if he sees black and empty. He will tell you no, he sees nothing. This is what you cannot know.

Now, can you imagine that nothing exists, nor a place where nothing exists? What cannot be known cannot be conceived in any way. Me, when I try to conceive this, I feel like an emptiness in my chest that tries to be unpleasant without succeeding, and that drives me, catapults me to investigate, find out, experiment... In a word,

Live. Realize the magnitude of being alive. It's amazing. Take this amazement and enjoy life while you can, don't cheat on Death, you scoundrel.

The individual death:

It is very simple explain individual death. Each one of us is an organism, an organized element, and this is going to get messy when the time comes without the possibility of maintaining it or rebuilding it. As there is nothing more than mathematical information, there is nothing that can be left to be ourselves, or that can transmit to another organism, not even before we die, because that organism will be another individual, no matter how similar. We are our organism and nothing else! When you die, the wizards reported by Carlos Castaneda already say it, you enter or return to what you cannot know, which is Death, and there is nothing left.

Have you ever fainted? Have you been given general anesthesia for an operation? There you have it, the Nothingness. The reports of a tunnel with light at the end, of extracorporeal experiences, etc., at the time of facing death, occur while there is still consciousness, and are, well "visions" of what I am exposing on this website, the arrival to Paradise, well occasional explosions of power that witches acquire, the power of consciousness, while there is consciousness.

If we do not suicide the planet, and as long as it is not destroyed by natural causes, or when we colonize exoplanets, it opens the possibility of prolonging life a little more than current expectations.

With technological progress, life will be extended more and more, except for a fatal accident or incurable disease, which will be less and less. Those who are now children have a life expectancy of about 120 years. Future generations more and more... Over time our descendants will be able to expand their organism with electronic elements, it is already beginning to be done, but this will not prevent their death when the time comes.

There is also Cryogenization, the freezing of at least the brain before its deterioration upon death to resuscitate it when

technologically possible. Well, it will be a way of living for a longer time in the future, but it has not yet been possible to do it without the destruction of the cells, and it is seriously doubted that it will ever be possible. In any case, it is clear that this will be the extension of life for some time, not immortality, this is safe.

Then, if this comforts someone. With the technological advancement too, in a few decades it will be possible to make a copy of our consciousness on a computer. Of course, those who do, I do not have time, I suspect, they will die the same, only that a replica of their whole being, with all their memories, experiences and wisdom, will continue to live, virtually, and develop without difference with our current life, except for greater possibilities. Is this going to be alive, to be dead? You will see but, surely, it will not be you who experiences this new life. When you die, you will not experience it in any way, you will have died totally and definitely. Such virtual life of this copy may be extended while the computers work, for the entire existence of humanity. Maybe until the last star goes out.

There may be one more possibility, the one offered by the Wizards of the Carlos Castaneda Report, which would mean prolonging consciousness for a few millennia, and that is to enter the "Third Attention." Note that this is not at all clear and rather it seems a last-minute betrayal of those who try to learn to face his or her death without the right approach, the wizards. I will not extend myself in analysis and considerations of it. There is the Report, find out. But it is said that such a possibility would not be within our reach until after a few generations of learning of a power that has been lost, and we only have descriptions, explanations, arguments and staging. Who wants to start such a path, go ahead, I wish him or her good luck, and it will be very interesting.

One more thing here. The Nirvana of the Buddhist is Death, do not make a mistake awkwardly. All religions are suicidal. They are the refusal to live because they are the denial of Death and without Death there is no Life. Buddhism has a true and beautiful basis, see "The Tibetan Book of the Dead," the authentic, the anonymous that was found in the crack of a cave, hidden there to rid it of censorship. This

wonderful book, short and compact, shows the path to the extinction of the government of ourselves, leading to the confrontation with what cannot be known, "The Clear Light, which you cannot conceive in any way, for it is the Void..." And it adds the tag "but not the void of nothingness", it couldn't be perfect. This book must be understood metaphorically. It is about leaving the "body", engineer, or plumber, or son of... or student, or patriot..., being something. And it guides beautifully not to take any other "body", not to "be reborn", in short, to get out of what deprives us of our non-being, which deprives us of Freedom. Just as elementary particles are not something that carries mathematical information, but only this information, we can fix taps, with skill, experience and efficiency, without being plumbers. Do not confuse and kill yourself dumb. We must extinguish the government, not the whole being. More clearly said, the ill human duality is solved by extinguishing the government, not extending the government to the whole, as this results in the death of the whole. The government is suicidal, only that function has.

It already says such a beautiful book "no need to meditate." Stupid Buddhists, who generally do not know this book, or discard it, or do not understand it, stop thinking, and come to stop it, and are refusing to live because they neither think nor feel nor act. They extinguish their whole being. What a silly thing! They are representing the General Drama of Humanity, I say: Extend the government to everything to kill the Totality. Because it is the government that stops thinking, does something it does not want to do, and this is suicidal by the beginning of accounts.

Let's see if we clarify this to meditate, so that no one gets lost. Everything I know I have found out thinking and, above all, researching and, also, creating artistic work by expressing what I find out. It's about learning to think correctly, and for this you just want to know the truth, the rest happens by itself, you don't have to use any technique, simply, free thinking, allowing distractions. Distractions are the "visions". Then, when you are saturated and tired, you walk through the park, you go a few days to the mountain, and here

sometimes you stop thinking for yourself, think about other things, in short, rest, distraction, and appear spontaneously new paths to follow. Nothing more to understand the Existence. This non-method allows to find harmony between the tremendous and frightening human noise. It is investigating what you want when you feel like it, without making an investment.

Then, stopping thinking is the key to powers, such as traveling to other Universes, etc. But the Tibetan Book of the Dead says: "Those powers do not wish them, do not wish them, no...". Precisely here is the matter in which the Castaneda wizards err in saying that what cannot be known destroys the mood, the enthusiasm... They are making a mistake because they look for those powers and, although they do it with some spirit and enthusiasm, they borrow them from what they cannot know, without knowing it, because the fact of learning and experiencing puts them in touch with it, although they are doing it backwards. It is what you cannot know that infuses the mood and enthusiasm. Without what you cannot know, any activity is tedious, whether traveling to other Universes or driving a Ferrari. What happens is that the human being is enraged with what cannot be known, which is Death, and is so far and alienated from it that just thinking about investigating it destroys him or her. And he or she seeks refuge in the powers pretending encouragement and enthusiasm, and finding them slightly, but bouncing, and blaming what can not be known of his background despair.

Then, get out of your stupid Tantrum, break your Pact with Death and, understand what you cannot know even if you cannot understand. This will quench your Existential Anguish and you will have the immensity of being alive. With this spirit and enthusiasm, learn to travel to other Universes, if you want, or drive a Ferrari if you are lucky enough to touch you in a raffle, as such will be the way to enjoy a Ferrari in Paradise. But don't worry, there will be many other very satisfying activities.

And remember that what is really satisfying is to increase awareness, in whatever way you can think of, joining Universal Goodness.

Realize that in what you cannot know there is no Time or Space. Therefore, Big-bang can only occur once. If it were repeated, time would have passed between one explosion and another, and if they were simultaneous they would be in a different place. This can't be, just try to divide by 0.

It is the Tantrum that you took from your peers that makes you think that there is an opportunity, but you always knew that there is not, that's why you signed the Pact with Death getting a false infinity. Renounce completely to Infinite and any kind of life after death. Then you will understand quickly and well. You will have the immensity of being alive while you live, and you will leave a wonderful world to your descendants and/or those of others.

Think that mortality is much better than immortality. If you were immortal... Hey, what will happen there?... This is where your fear to Death comes from. Knowing that we are mortals, the fear to Death disappears, do you understand this?
